FOLCO® AQUASCREEN FS 10 – 904 SD EFFEKTBINDEMITTEL

General information

Type of product Water based product based on synthetic resin dispersion.

Field of Application FS 10 – 904 SD effect binder is after adding of glitter pigments

suitable for printing on paper, non woven and vinyl wallpapers using

the rotary screen printing process.

Properties

 forms a transparent film after drying for optimized glitter and pearlescent effect

• good adhesion to paper, non-woven and vinyl wallpapers

high migration resistance

· high thermo stability

suitable for embossing and hot embossing

long open time

glycol free

· it does not release any unpleasant odours

Generally, printing results such as print-out, colouring, adhesion, abrasion resistance and water proofness are very good however; they can be influenced by the printing material.

Characteristics

Viscosity approx. 40 dPas Haake VT 2 plus, MK1 20 °C

pH-value 7 - 9

Solid content approx. 20 %

Further properties

Washing Values With the product printed on paper, non woven and vinyl wallpaper

can be reached high washing values (symbol 3 waves) according to

EN 12956.

Temperature stability The product is usable for vinyl wallpaper printed under the usual

conditions.

Others Basic material and processing conditions can affect the properties.

Therefore, we recommend that basically self-audits of the properties

be achieved on the finished products.

FOLCO® AQUASCREEN FS 10 – 904 SD EFFEKTBINDEMITTEL

Introductions for use

Printing Viscosity The printing viscosity can be adjusted by adding water.

Processing technology The product has been developed for screen printing. The glitter

pigment should be stirred homogeneous into the binder. For getting of good printing properties we recommend to use hexagonal polyester glitter. The hole diameter of the screen printing stencil should have

min. the twice of the glitter diameter.

Speed The possible printing speed depends on the printing material, type of

machines, temperature and the air condition in the channel.

Drying Because of the high application quantity the appropriated drying

capacity is required. For a sufficient film forming of the product we recommend the drying temperature of min. 130°C. The temperature

resistance of the glitter should be attended.

Cleaning With water, eventually could be used a stencil cleaner. The product

should not get too dry.

Additional advices

Safety advice While dealing with the product please attend the information in the

safety data sheet.

Storage Should be stored at temperatures between +5 °C and +25 °C.

When kept in unopened original containers the product can be stored

for 6 month.

The storage life is reduced as a result of contamination and thinning.

Consequently the usability of printing inks taken from opened containers and residual inks must be checked before use.

The product has to be stirred well before use.

This This data sheet replaces all former technical information.

Last change: 07.01.2015

The characteristic values required for the product to be released are checked by our quality control department at the time of production; these values may change in line with storage conditions and periods and may be higher or lower than the specified limit values.

The advice we provide on the application of our products is based on extensive development work and many years of experience and is given to the best of our knowledge. However, the wide variety of requirements on site under the most diverse conditions mean that it is necessary for the processor to test the product for its suitability in any given case. We reserve the right to make changes in keeping with technical developments or improvements to our products. The agreed product characteristics are exclusively as set out in this technical information sheet. Any further agreements on product characteristics must be made in writing to be valid. This applies in particular with regard to the product's suitability for a specific purpose.
